A Nation of Wimps: The High Cost of Invasive Parenting
Format: Book Author: Hara Estroff Marano Year: 2008
Marano, editor-at-large at Psychology Today and author (Why Doesn't Anybody Like Me? A Guide to Raising Socially Confident Kids), takes a penetrating look at the growing trend of invasive parenting. Marano likens many parents to hovering helicopters or snowplows trying to remove all obstacles. The unfortunate result is that children become increasingly fragile, unable to make decisions or cope with failure. Interspersing her text with interviews from experts and cutting-edge research, Marano follows the trail from heavily programmed preschoolers and overprotected grade school kids to stressed out, overachieving high school students and dependent college kids caught in a rising campus mental health crisis (thanks to cellphones, the new umbilical cord, they carry their parents in their jeans pockets). Rather than helping children to find success and happiness, the author argues, this over-involvement has exploded into a generation of infantilized wimps who can't handle everyday life. Instead, she advises, help your kids fail—more is learned from mistakes than from success, including critical thinking skills. The book is chock-full of fascinating information, some of it controversial, such as a suspected link between a diagnosis of ADHD and insufficient free play in the early years. Marano's dire warning to back off will hit a raw nerve with many parents, but her message may come not a moment too soon for their kids.

Bounce: Mozart, Federer, Picasso, Beckham and the Science of Success
Format: Book  Author: Matthew Syed  Year: 2010
Syed, sportswriter and columnist for the London Times, takes a hard look at performance psychology, heavily influenced by his own ego-damaging but fruitful epiphany. At the age of 24, Syed became the #1 British table tennis player, an achievement he initially attributed to his superior speed and agility. But in retrospect, he realizes that a combination of advantages—a mentor, good facilities nearby, and lots of time to hone his skills—set him up perfectly to become a star performer. He admits his argument owes a debt to Malcolm Gladwell's Outliers, but he aims to move one step beyond it, drawing on cognitive neuroscience research to explain how the body and mind are transformed by specialized practice. He takes on the myth of the child prodigy, emphasizing that Mozart, the Williams sisters, Tiger Woods, and Susan Polgar, the first female grandmaster, all had live-in coaches in the form of supportive parents who put them through a ton of early practice. Cogent discussions of the neuroscience of competition, including the placebo effect of irrational optimism, self-doubt, and superstitions, all lend credence to a compelling narrative; readers who gobbled up Freakonomics and Predictably Irrational will flock to this.

**FUNino – The Beautiful Game for Kids**  
Format: Book  
Author: Horst Wein  
Year: 2012  
Horst Wein’s unique training programme for 7-9 year olds, **FUNino**, is a proven component of the Spanish Football Development Model **Futbol a la medida del Niño** or football designed for children since 1993. Today it is an expanded and updated game programme used by thousands of coaches around the world. This breakthrough approach to inducting young children into the game of football obviously has an emphasis on **FUN** so that children come to fall in love with the game from the earliest ages. It has been called the **Revival of Street Football**. Having **four goals out wide** immediately introduces width and helps to prevent the familiar swarming at the younger age groups. Also having two goals to attack with three defenders means that one goal is usually less-defended, which means there is always a better option available. Both of these factors encourage young players to look before they act and to think before they execute – so game intelligence is introduced naturally from the earliest ages.
The Game and the Glory – Michelle Akers Autobiography
Format: Book  Author: Michelle Akers with Gregg Lewis  Year: 2000
Akers, a member of the U.S. Women's National Soccer Team since its inception in 1985, was at 33 the oldest player when the team won the magical World Cup Final at the Rose Bowl in 1999. Along the way, she suffers her parents' divorce, 12 knee operations, and, most remarkably for an elite athlete, a diagnosis of CFIDS (chronic fatigue immune dysfunction syndrome). Sapping her energy and requiring post-game intravenous injections, this illness made it impossible for her to train and play at her usual "all-out" level. Much of the book deals with how she overcame CFIDS by combining her innate competitive focus and perseverance with Christian faith. She has founded a ministry to spread the Christian message through soccer. We see Akers the incredible athlete but also the ordinary person kidding around with teammates and afraid of public speaking.

Go for the Goal – A Champion's Guide to Winning in Soccer and Life
Format: Book  Author: Mia Hamm and Aaron Heifetz  Year: 1999
For the more than seven million girls—from knobby-kneed tykes to high school and college stars—who are tearing across the country chasing a soccer ball and dreams of glory, there is one name that eclipses all others, male or female: Mia Hamm. With her cheetah-like acceleration and lightning-bolt shot, Hamm broke nearly every record in her sport, while galvanizing a whole generation of fans and players. *Go for the Goal* is not only the inspiring story of how a tiny suburban sprite became a global terror with a ball (and the world) at her feet—it's also a step-by-step or dribble-by-dribble guide for any kid with the all-American dream of making the team and becoming a champion. Filled with personal anecdotes and fully illustrated with both action and instructional photographs, *Go for the Goal* shows readers exactly how to master the silky skills and techniques that made Hamm and her teammates the finest women's soccer team in the world.

Inverting the Pyramid – A History of Football Tactics
Format: Book  Author: Jonathan Wilson  Year: 2008
For soccer fans, following, discussing, and arguing about the tactics a manager puts into play are part of what makes the sport so appealing. This fascinating study traces the history of soccer tactics back from such modern pioneers as Rinus Michels, Valeriy Lobanovskyi, Catenaccio, and Herbert Chapman. Along the way, author Jonathan Wilson, an erudite and detailed writer who never loses a sense of the grand narrative sweep, takes a look at the lives of the great players and thinkers who shaped the game, and discovers why the English in particular have proved themselves so "unwilling to grapple with the abstract."

Keane – The Autobiography
Format: Book  Author: Roy Keane with Eamon Dunphy  Year: 2002
The most talked about, written about and argued over sports autobiography of 2002, *Keane: the Autobiography* does not disappoint. This story of Manchester United and Ireland captain Roy Keane's brilliant and controversial career, written in collaboration with Irish journalist and former professional footballer Eamon Dunphy, crackles with score-settling vigor. It presents a revisionist view of a life in football that has had tabloid editors rubbing their hands with glee almost from the moment the fiery, confrontational midfielder made his British debut for Nottingham Forest under arch eccentric Brian Clough right through to his sensational bust-up with international boss Mick McCarthy and subsequent departure from the 2002 Irish World Cup squad on the eve of the finals. Amid all the wrangling and point-scoring Dunphy and Keane have written a rags-to-riches review of Keane's journey from a poor, battling background in Cork to the £50k a week highlife at Old Trafford. It's very entertaining, although
an independent biographer would doubtless have put a less heroic spin on proceedings. The two key headline-grabbing stories—the war with McCarthy and the allegedly deliberate injuring of Alfie Haaland—read somewhat differently in the book from the way they did in the papers. Make no mistake about it, Keane is frank about his own failings, franker about the failings of others and prepared to spill the beans to some extent about being the odd-man-out in the Old Trafford glam-fest. But this is very much his side of the story.

Leading with the Heart – Coach K’s Successful Strategies for Basketball, Business and Life
Format: Book          Author: Mike Krzyzewski with Donald Phillips      Year: 2000

Now, in Leading with the Heart, Coach K talks about leadership—how you earn it, how you practice it, and how you use it to move your organization to the top. From the importance of trust, communication, and pride, to the commitment a leader must make to his team, this inspiring book is a must-read for anyone who loves college basketball—or who simply wants to win in any competitive environment today.

Mindset: The New Psychology of Success
Format: Book          Author: Carol Dweck              Year: 2006
Mindset is "an established set of attitudes held by someone," says the Oxford American Dictionary. It turns out, however, that a set of attitudes needn’t be so set, according to Dweck, professor of psychology at Stanford. Dweck proposes that everyone has either a fixed mindset or a growth mindset. A fixed mindset is one in which you view your talents and abilities as... well, fixed. In other words, you are who you are, your intelligence and talents are fixed, and your fate is to go through life avoiding challenge and failure. A growth mindset, on the other hand, is one in which you see yourself as fluid, a work in progress. Your fate is one of growth and opportunity. Which mindset do you possess? Dweck provides a checklist to assess yourself and shows how a particular mindset can affect all areas of your life, from business to sports and love. The good news, says Dweck, is that mindsets are not set: at any time, you can learn to use a growth mindset to achieve success and happiness. This is a serious, practical book. Dweck’s overall assertion that rigid thinking benefits no one, least of all yourself, and that a change of mind is always possible, is welcome.

Outliers - The Story of Success
Format: Book          Author: Malcolm Gladwell            Year: 2008
SignatureReviewed by Leslie ChangIn Outliers, Gladwell (The Tipping Point) once again proves masterful in a genre he essentially pioneered—the book that illuminates secret patterns behind everyday phenomena. His gift for spotting an intriguing mystery, luring the reader in, then gradually revealing his lessons in lucid prose, is on vivid display. Outliers begins with a provocative look at why certain five-year-old boys enjoy an advantage in ice hockey, and how these advantages accumulate over time. We learn what Bill Gates, the Beatles and Mozart had in common: along with talent and ambition, each enjoyed an unusual opportunity to intensively cultivate a skill that allowed them to rise above their peers. A detailed investigation of the unique culture and skills of Eastern European Jewish immigrants persuasively explains their rise in 20th-century New York, first in the garment trade and then in the legal profession. Through case studies ranging from Canadian junior hockey champions to the robber barons of the Gilded Age, from Asian math whizzes to software entrepreneurs to the rise of his own family in Jamaica, Gladwell tears down the myth of individual merit to explore how culture, circumstance, timing, birth and luck account for success—and how historical legacies can hold others back despite ample
individual gifts. Even as we know how many of these stories end, Gladwell restores the suspense and serendipity to these narratives that make them fresh and surprising. One hazard of this genre is glibness. In seeking to understand why Asian children score higher on math tests, Gladwell explores the persistence and painstaking labor required to cultivate rice as it has been done in East Asia for thousands of years; though fascinating in its details, the study does not prove that a rice-growing heritage explains math prowess, as Gladwell asserts. Another pitfall is the urge to state the obvious: No one, Gladwell concludes in a chapter comparing a high-IQ failure named Chris Langan with the brilliantly successful J. Robert Oppenheimer, not rock stars, not professional athletes, not software billionaires and not even geniuses—ever makes it alone. But who in this day and age believes that a high intelligence quotient in itself promises success? In structuring his book against that assumption, Gladwell has set up a decidedly flimsy straw man. In the end it is the seemingly airtight nature of Gladwell's arguments that works against him. His conclusions are built almost exclusively on the findings of others—sociologists, psychologists, economists, historians—yet he rarely delves into the methodology behind those studies. And he is free to cherry-pick those cases that best illustrate his points; one is always left wondering about the data he evaluated and rejected because it did not support his argument, or perhaps contradicted it altogether. Real life is seldom as neat as it appears in a Malcolm Gladwell book.

The Power of Habit - Why We Do What We Do In Life and Business
Format: Book  Author: Charles Duhigg  Year: 2012
In The Power of Habit, award-winning business reporter Charles Duhigg takes us to the thrilling edge of scientific discoveries that explain why habits exist and how they can be changed. Distilling vast amounts of information into engrossing narratives that take us from the boardrooms of Procter & Gamble to sidelines of the NFL to the front lines of the civil rights movement, Duhigg presents a whole new understanding of human nature and its potential. At its core, The Power of Habit contains an exhilarating argument: The key to exercising regularly, losing weight, being more productive, and achieving success is understanding how habits work. Sacred Hoops – Spiritual Lessons of a Hardwood Warrior
Format: Book  Author: Phil Jackson and Hugh Delehanty  Year: 1995
One of the most successful coaches in NBA history, Chicago Bulls head coach Phil Jackson provides an inside look at the higher wisdom of teamwork with Sacred Hoops -- Jackson's philosophy of mindful basketball and his lifelong quest to bring enlightenment to the competitive world of professional sports. A new paradigm of leadership based on Eastern and Native American principles, Jackson's approach flies in the face of the egoistic, winner-take-all attitude that has changed the face of American sports. Rather than winning through intimidation, Jackson -- who describes himself as a Zen Christian -- stresses awareness, compassion and most of all selfless team play. Filled with stories about Michael Jordan, Scottie Pippen, Toni Kukoc and other members of the Bulls, Sacred Hoops reveals how Jackson directs his players to act with a clear mind; to respect the enemy and be aggressive without anger or violence; to live in the moment and stay calmly focused in the midst of chaos, so that the "me" becomes the servant of the "we." In Sacred Hoops, Jackson takes us inside the mind of the thinking man's coach as he builds one of the greatest teams of all time. Not just for sports fans, this inspiring memoir is for anyone interested in the potential of the human spirit.

**The Sports Gene - Inside the Science of Extraordinary Athletic Performance**  
Format: Book  
Author: David Epstein  
Year: 2012  
In this controversial and engaging exploration of athletic success, *Sports Illustrated* senior writer David Epstein tackles the great nature vs. nurture debate and traces how far science has come in solving this great riddle. He investigates the so-called 10,000-hour rule to uncover whether rigorous and consistent practice from a young age is the only route to athletic excellence. Along the way, Epstein dispels many of our perceptions about why top athletes excel. He shows why some skills that we assume are innate, like the bullet-fast reactions of a baseball or cricket batter, are not, and why other characteristics that we assume are entirely voluntary, like an athlete’s will to train, might in fact have important genetic components. This subject necessarily involves digging deep into sensitive topics like race and gender. Epstein explores controversial questions such as:

- Are black athletes genetically predetermined to dominate both sprinting and distance running, and are their abilities influenced by Africa’s geography?  
- Are there genetic reasons to separate male and female athletes in competition?  
- Should we test the genes of young children to determine if they are destined for stardom?  
- Can genetic testing determine who is at risk of injury, brain damage, or even death on the field?

Through on-the-ground reporting from below the equator and above the Arctic Circle, revealing conversations with leading scientists and Olympic champions, and interviews with athletes who have rare genetic mutations or physical traits, Epstein forces us to rethink the very nature of athleticism.

**The Talent Code**  
Format: Book  
Author: Daniel Coyle  
Year: 2009  
A New York Times bestselling author explores cutting-edge brain science to learn where talent comes from, how it grows—and how we can make ourselves smarter. How does a penniless Russian tennis club with one indoor court create more top 20 women players than the entire United States? How did a small town in rural Italy produce the dozens of painters and sculptors who ignited the Italian Renaissance? Why are so many great soccer players from Brazil? Where does talent come from, and how does it grow? New research has revealed that myelin, once considered an inert form of insulation for brain cells, may be the holy grail of acquiring skill. Journalist Daniel Coyle spent years investigating talent hotbeds, interviewing world-class practitioners (top soccer players, violinists, fighter, pilots, artists, and bank robbers) and neuroscientists. In clear, accessible language, he presents a solid strategy for skill acquisition—in athletics, fine arts, languages, science or math—that can be successfully applied through a person’s entire lifespan.
